Platform +Citizenship

+Citizenship is a learning, collaborative and sharing platform that aims at preventing school dropout and promotion of equal access to contents in kindergarten and primary education. This multiplatform solution consists of the following areas and functionalities:

Platform and mural
Contents to work on citizenship education
Creation of local curriculum
Digital curriculum content
Badge management system
Integration of educational projects and community projects
Integration with SEI and SIGA platforms

Mural

The Mural is a social and community network to share and communicate with the educational community through the publication of articles, photographs, videos and activities within the classroom

Content

Education for Citizenship

The students will explore the themes of Environmental Education, Sustainable Development and Health Education.
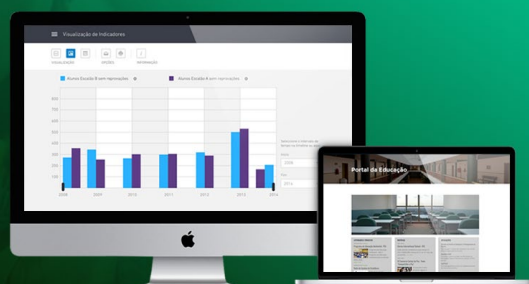

Local Curriculum

Based on the concepts of Heritage and Local Power, the students will know the material and immaterial heritage of their municipality and understand the importance of their participation, as active and responsible citizens, in the construction of a improved Community.

Curriculum Contents

Hundreds of multimedia activities, interactive and dynamic, developed for Kindergarten Education and for Primary School, to be used in playschool, at school and at home.

Municipal Observatory of Education

A 3 in 1 solution that allows you to follow up and deepen, with ease and rigor, the educational policies implemented by the municipality and publicize the work developed in the Education sector.

1 // Portal of Education

Municipal website for publication and sharing of information, especially for parents, teachers, students and educators in general.

2 // Interactive Educational Charter

Dynamic map of the whole school park with access to characterization by school, gallery of images, contacts and other relevant information.

3 // Business Intelligence Platform

Platform that allows with coherence and reliability to obtain statistical information and monitor the course and educational success of students and young people. From the intersection of indicators it enables local authorities to access documentation to support their implementation of responses towards the development and improvement of education indicators.

Questionnaires and visualization of indicators

Intuitive interfaces and custom templates
Complex response scenarios
Grouping indicators, applying and combining filters
Visual analysis of data and timeline access

Backoffice Management

Creation of indicators
Importing External Data and Exporting to Excel
Crossing with data from SEI and SIGA platforms
Possibility of statistical analysis of the data

Future Classroom

Support for the successful implementation of the Future Classroom by sustainably equipping schools with computer equipment that creates innovative learning environments conducive to student learning.

siga

SIGA Platform

SIGA is a modular and customizable platform that allows you to manage online, quickly and efficiently, the various procedures of municipal education management.

Its added value lies in the streamlining of processes and the increase of service efficiency by optimizing them. The reduction of cost and response time leads to an increase of satisfaction of all intervener and greater productivity and improvement in human resources management.

Management Modules

Social action management
Online application management
Meal and bar management
Curricular management
Transportation management
Management and inventory of spaces and school grounds
Payment management
Library management
Management of curricular enrichment activities
Notifications

Customization

SIGA can be customized with colors and Municipalities identity, who can also select the modules that better meet their reality.

Multiplatform solution

As SIGA is based on web technologies, the management of processes related to the municipality can be done at anytime and anywhere from any device (computer, tablet or smartphone) with Internet connection.

Certification and Integration

This solution is certified by the Tax Authority and integrated with SIBS, PT Pay, AIRC, Medidata, Litho Formas and Mailtec - Finishing, as well as with communications providers.

Support and Technical Assistance

SIGA has a Customer Support Center that guarantees technical assistance via email and telephone; consulting actions necessary for its correct implementation and specialized training to all users.

sei

SEI Platform

SEI is a management platform that allows all education and training establishments to completely follow the academic course of students - from their enrollment process to their completion or transfer - and the day-to-day management of the educational process.

In addition to ensuring the centralization of information, SEI allows you to reduce both material and human costs and response time, thus allowing a real optimization of resources.

Management Modules

User management
Curricular management
Class management
Payment management
Inventory management
Management of school social action
Parents and Education Officers

Customization

SEI can be customized with the school's identity, who can also select the modules that better meet their reality.

Multiplatform solution

As SIGA is 100% web technologies, the management of processes related to the municipality can be done at anytime and anywhere from any device (computer, tablet or smartphone) with Internet connection.

Certification and Integration

SEI is certified by MISI @ - Ministry of Education and Science in the modules Student Management - Public Schools and in the School Social Action module (SASE).

## Support and Technical Assistance

SEI has a Customer Support Center that guarantees technical assistance via email and telephone; consulting actions necessary for its correct implementation and specialized training to all users.

SMARTconnect

SMARTconnect is an integrated communication tool which allows the Municipality to contact in a simple and immediate manner with all their citizens through the registered users database in the mobile application or by importing external contacts. This service allows sending SMS, Emails and Push Notifications in real time, in a fast, effective, simple and inexpensive way.

Multi-channel strategy

The Municipality can choose the communication channel it wants to use – email, push notifications or SMS – making the communication process much more effective.

Cost reduction

SMS sending at the most competitive market price and use of less intrusive means of communication. Free sending of push notifications and emails.

Customization

Customized and segmented communication according to the contacts database of the Municipality.

Security and registration

Full guarantee of privacy protection and access to a management back office.

Control

Access to a panel of indicators for credit control, status of notifications, contact database and communications most used.

Subscription Service

Make available an SMS service for subscribers on the Municipality's website and contact citizens in a simple and immediate way. From a list of interests customized by the local government (traffic information, programmed road cuts, change of services operations, news, events and others) communicate with citizens in a fast, effective, simple and inexpensive way.

Reduction of costs

Send SMS at the most competitive price in the market and communicate in a less intrusively way.

Customization

Possibility of total customization of the list of interests by adjusting it to the real needs of the Municipality. Customized and segmented communication according to the interests of subscribers.

Control

Access to SMS submission reports and monthly reports for control and billing purposes, as well as the history of sent messages.

Integration

Configuration and integration with external systems.

Security and registration

Full guarantee of privacy protection. Access to a Backoffice for sending SMS and for subscribers database.

SMS Provider

Get SMS packages and use our provider to send text messages to your target audience (suppliers, customers, employees, residents, among others). Warranty of total privacy protection. Access to SMS submission report and monthly reports basis for control and billing purposes.

🏛 City **App**

Discover the mobile application that lets you gradually, quickly and conveniently provide the services of your Autarchy, 24 hours a day. Show, to people in and outside your city, the best your municipality has to offer, and improve the visibility of the City Hall´s work.

Services

Broaden the offer of City services and ease day-to-day demands to citizens.

Occurrences	Request of appointments
Transportation	All-Attendance Bureau
Water counter	IPMA Integration
Civil protection	Waiting line
Collection of Large Waste	Meteorology
Collection of Recycling	Education platform
Waste	Sending suggestions
Service Pharmacies	Downloads

Communication

Publicize the work carried out by your local authority and contact with citizens and tourists in a fast and efficient way.
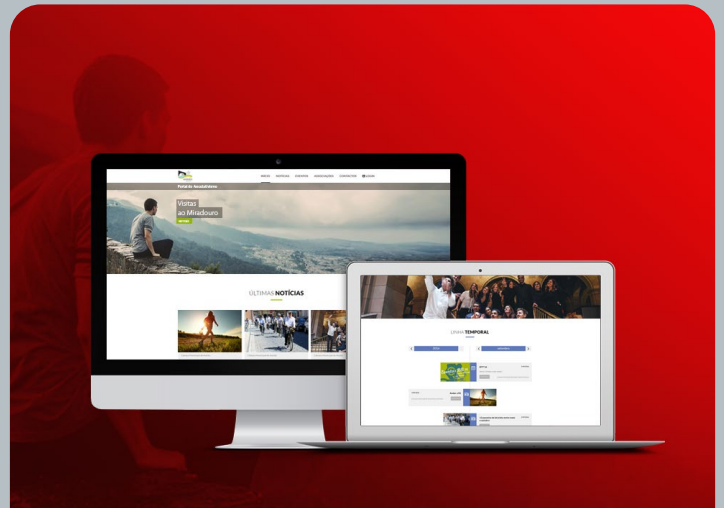

The municipality	Advertising
Message from the President	Push notifications
News	SMS subscription
Municipal agenda	Subscribe to newsletters
Satisfaction surveys	Share on social networks
Communication and edicts	Useful contacts
Works and projects	

Tourism

Make your Municipality´s tourism potential and the best your region has to offer.

Portal of **Associativism**

Intensify social presence and give visibility to actions carried out by different collectivities is the objective of the Portal of Associativism, a website that aims at promoting the associative movement and promoting habits of citizenship through the dissemination and sharing of information between the Municipality, Local Associations and general public.
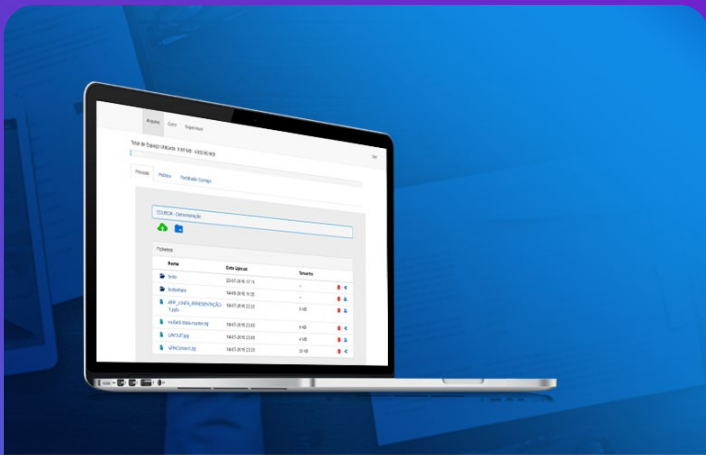

The Portal of Associativism allows the Municipality not only to collect and computerize all identifiable elements of the associative reality, but also to create its own Municipal Register of Associations and Collectivities, to manage the applications of the associations to municipal support programs, to provide forms and communicate directly with all participants.

As a participatory space, this Portal allows associations to publicize their initiatives, to communicate with the municipality and with each other, as well as to apply online to municipal support programs.

Go**Social**

GoSocial is a management software for Municipal Social Action which enables a junction of the efforts of local authorities and networks of social support in identifying problems that need intervention. It assists in setting priorities and optimizing the different response capacities thus allowing a rapid detection of possible means of action. This platform has five management modules: entities, procedures, supports, evaluations and social charter.
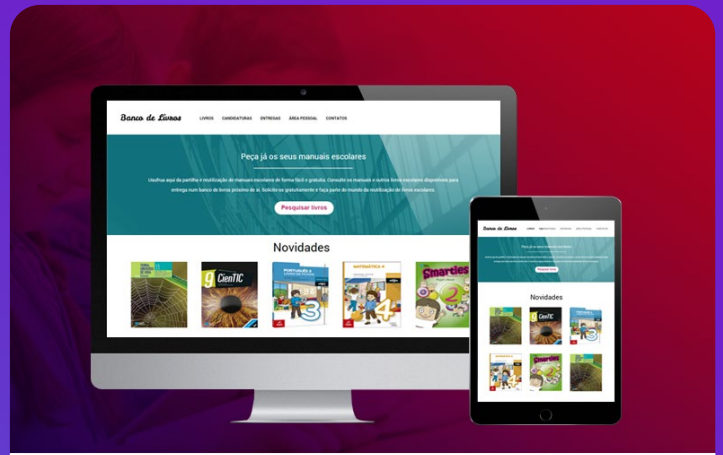

SMARTvault

SMARTvault is a management and storage tool for online data, developed aiming to Municipalities, Schools and School Groups. Through the acquisition of a certain quota, these entities will have a Cloud placeholder for uploading files, creating folders, data storage and document sharing.

Its added value lies in the autonomous management of the quota to be distributed by the different users and a total management of the access to information, by user type or even by individual user.

Access to SMARTvault is secure, simple and easy, from any location and from any device with internet connection.
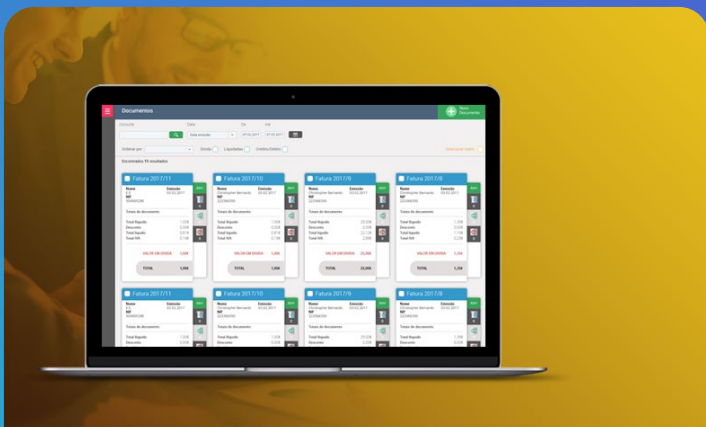

Online **Book Bank**

Decrease family expenses regarding the acquisition of new school books and simplify both the process of collection and lending, thus is the aim of the OBB. This web platform joins the initiatives of all institutions promoting and practicing this role within a logic of free attribution and/or loan of used books to students who attend obligatory schooling.

1 Delivery of used school books and textbooks in the various Banks // 2 Cataloging and entry into the joint database of OBB // 3 Book search and booking // 4 Free distribution to students.
